Davies

Policy Artificial Intelligence (POLAi)

Policy Compliance Solutions to Ensure Regulatory Form Compliance of Issuing Entities

About POLAi

At Davies, we understand the importance of ensuring issuing entities' regulatory compliance in the issuance of policy documents and have developed a unique artificial intelligence product solution designed to audit compliance of issuing entity partners.

Davies' new proprietary policy platform utilizes artificial intelligence to verify that the correct state-approved policy form was used and completion of the issued policy document complies with allowed form changes.

Our detailed and itemized report identifies policy form infractions section by section with image demonstrations.

Benefits

Ensure Regulatory Compliance with Issuing Entity Partners

Avoid Non-Compliance Regulatory Penalties

Avoid Unintended Risk

How Does POLAi Work?

1 Filed/Approved Policy Forms are imported into POLAi.

2 Issuing Entity Policy Forms are imported into POLAi for analysis.

3 POLAi uses an innovative mapping tool to verify the correct policy form is used and compares the filed form to the issued form so that it is produced with only allowed changes.

4 POLAi generates a detailed and itemized report extracting each document's data section by section and the associated infractions identified.

5 These findings are communicated to the carrier.

Regulatory policy compliance is essential for every carrier to insure continuity of business and avoid costly fines and penalties.
